ATGAMES

LEGENDS CORE OVERVIEW

The value priced AtGames Legends Core is the Open and Connected Streaming Game Console™.

The Legends Core plugs and plays on any TV for true big screen gaming. Featuring 100 built-in licensed arcade and console games, as well as impressive streaming and connectivity capabilities, the Legends Core is the ultimate television companion.

It can easily connect with off-the-shelf Bluetooth headsets and Bluetooth and USB PC game controllers, as well as the Legends Arcade Family of Gamer series products for the ultimate in arcade control.

As the Open and Connected Streaming Game Console™, the Legends Core is ready for everything from feature updates to game streaming to leaderboards to competitive play, and so much more. And since the Legends Core is part of the Legends Arcade Family series of products running on the Legends Arcade Platform, the options don't stop there either.
The Legends Core is a platform that's always ready to grow!

Through the Legends Arcade Platform's ArcadeNet® and BYOG™ (Bring Your Own Game) functionality, you can enable access to even more games and features. ArcadeNet® provides instant play of a growing selection of games, online play, and high-score leaderboards. BYOG™ lets you play your digital PC games with the Legends Arcade Platform's unique controls and display. Through the AtGames Leagues Leaderboards™ (ALL), the premier event and high score tracking destination for the Legends connected home arcade series of products, you can see active and upcoming solo- and team-based game events, as well as the top rankings - and where you place - for a growing selection of legendary games. You can also live stream your gameplay through the most popular services. An SDK for developers provides flexibility for third party features and services.
